

TENSAGEX

Sodium Laureth Sulphate

Sodium Laureth Sulphate (SLES) is an anionic surfactant, widely used as a primary surfactant in rinse-off products. In addition to excellent detergency, it also has ideal emulsification property and foamability. It has good hard-water tolerance and compatible with all surfactants except the cationic surfactants. SLES is readily biodegradable in an enrichment culture and aerobic conditions.

Produced from natural fatty alcohols, TENSAGEX SLES features very high purity and low in 1,4-dioxane, salt and colour. TENSAGEX SLES meets the latest regulatory restrictions for household cleaning products and personal care products.

TENSAGEX SLES is available as a high-active paste for economical transportation and storage that could be diluted to the finished product's use level. It is also available in the form of low active liquid for easy processing.
